

LANDESK® OSD to Provisioning Migration – 2 Day Training

OSD TO PROVISIONING MIGRATION

This specialist course is designed to go deeper into OS Provisioning concepts than the standard LDMS Boot Camp training either as classroom training or as an actual migration of your production OSD Scripts to OS Provisioning Templates. Either model will be actual Provisioning of systems (physical where made available).

TRACK 1 – MIGRATING A PRODUCTION OSD SCRIPT

Ideal for two or three students; one production OSD script is used as the basis for building a production ready OS Provisioning Template. The most effective way to understand OS Provisioning with a functional outcome.

TRACK 2 – BUILDING A PRODUCTION TEMPLATE

Ideal for up to six students, this track is best suited where OS Deployment has not been in use but a full practical understanding of building and maintaining templates is required.

Day 1

- *Comparing OSD to OSP*
 - *The key differences between the technologies*
- *Mapping the OSD Sections to the Provisioning Template*
- *Understanding the role of Preferred Servers*
- *Introducing the Configuration Sections*
- *Linking Templates*
- *Creating the OS Provisioning Template*
 - *OS Capture*
 - *Target Device Disk Configuration*
 - *ImageW vs. ImageX vs. Scripted Build*

Day 2

- *Creating the OS Provisioning Template (cont.)*
 - *Deploying the Selected Image type*
 - *Hardware Independent Imaging Methodology*
 - *Configuring the Agent*
 - *Software Load/Package Migration*
 - *Patching the OS*

¹Course schedule is indicative and will adjust based on reference OSD Script content or specific business needs.

²Physical systems must be used for best results during production OSD Migration (Track 1) whereas physical is optional for Track 2.

LDMS 9.6 RETIRES OS DEPLOYMENT. IF YOU HAVEN'T MIGRATED YET YOU WON'T HAVE A CHOICE WHEN YOU UPGRADE.

At MarXtar we were fans of the simplicity of OSD but advised our customers it would not be much longer for this world. At Interchange 2014 this was confirmed to be the case.

This focussed course aims to get you on track for making use of the more powerful but more complex OS Provisioning while you have time to adapt rather than when you no longer have a choice.

Run by a MarXtar consultant highly experienced in the use of OS Provisioning, this is your chance to learn either by classroom or hands-on methods.
